EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such amendment, it **MUST** be submitted no later than the payment of the issue fee.

Examiner's amendment claims 4-5 and 10-27 are canceled as directed to the non-elected invention without traverse.

Allowable Subject Matter

2. Claims 1-3, 6-7, 9 and 28-33 have been allowed.

Reason(s) for Allowance

3. The following is an Examiner's statement of reason(s) for allowance: Upon review of prior art of record, no method for fissile material identification **with an array of fission-fragment detectors, a first set of scintillator paddles, and a second set of scintillator paddles, wherein the array of fission-fragment detectors, the first set of scintillator paddles, and the second set of scintillator paddles (a) are arranged sequentially in a direct path of the emerging photon beam such that each receives the emerging photon beam, and (b) are sensitive to different ranges of photon beam energy,** as claimed by the Applicant, exists in the nuclear art. Other details are in the record of prosecution of this application.

Independent claim 1 and their dependent claims 2-3, 6-7, 9 and 28-33 are allowed because the following closes prior art of references of record Neale et al. (U.S. Patent # 5,524,133; Neale hereinafter), Gunther et al, ("Applicability of a simple parallel plate avalanche detector to photofission experiments", Nucl. Instrum. Methods, 163, 459-461, 1979; Gunther hereinafter, cited before) and Groom ("Photon and electron interaction with matter", LBNL, 1998, p. 152, 153) in any combination failed to teach or render obvious to one of ordinary skill in the art, (claim 1):

A method for identifying fissile material within an interrogated vessel, comprising:

casting an incident photon beam from an electron beam accelerator through the interrogated vessel on the fissile material;
detecting an emerging photon beam within an energy range from about 1 MeV to about 50 MeV from the fissile material **with an array of fission-fragment detectors, a first set of scintillator paddles, and a second set of scintillator paddles, wherein the array of fission-fragment detectors, the first set of scintillator paddles, and the second set of scintillator paddles (a) are arranged sequentially in a direct path of the emerging photon beam such that each receives the emerging photon beam, and (b) are sensitive to different ranges of photon beam energy;**
obtaining a first signal from the array of fission-fragment detectors, a second signal from the first set of scintillator paddles, and a third signal from the second set of scintillator paddles, each signal indicative of photon yield within the different ranges of photon beam energy; and
determining a photon energy regime of the emerging photon beam through identification of a drop in photon yield in at least one of the three signals, the determined photon energy regime identifying the fissile material within the interrogated vessel.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

This statement is not intended to necessarily state all the reasons for allowance or all the details of why the claims are allowed and has not been written to specifically or impliedly state that all the reasons for allowance are set forth (MPEP 1302.14).

Any comments considered necessary by the Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled, "Comments on Statement of Reasons for Allowance."
